In Stock Panels for Quick Nation-Wide Delivery

We offer competitive pricing and fast efficient nationwide distribution from our centrally located facilities. Stocking programs and regional distribution is available to those customers who can benefit from short lead times.

We are proud of our commitment to customer satisfaction and stand behind all our quality made products. We offer "Made in the USA" certification to those customers who prefer to buy high quality American made products.

We encourage engineers and operators to bring your containment needs to us to find solutions.

A Rip Can Start Anywhere on a Cover, But You Determine Just How Far It Can Go.

**Headwater Products
Introduces the**

**Uni-Cover™
Interim & Rain Covers
with Built-in
Ballast System and
Rip Stop Technology**

Headwater Products is proud to introduce the Uni-Cover™ to the waste industry. Uni-Cover tarpaulins combine a patented built in ballasting system and rip stop technology. Your Uni-Cover virtually eliminates the risk of total loss due to tarp failure or "saw through" and the replacement of the standard rope ballast system minimizes the cost of deployment. No more hassles of handling cumbersome panels or utilizing specialized seaming equipment. Even on a securely deployed cover, tears may occasionally occur. Our use of rip-stop technology allows you to determine how far these tears may go with horizontal and vertical rip-stops placed at intervals. Our unique cross tie UV stable sandbags and built in webbing with strength indicators give added security and flexibility in sandbag placement where additional ballast is needed. When you purchase the Uni-Cover, you can be assured you have chosen the most advanced, most cost-effective cover in the industry.

Daily Covers

We stock popular sizes of two types of daily covers for immediate shipment. Our standard cover features perimeter hemming with seat belt webbing and lift loops. Our heavy duty Uni-Cover daily cover features our durable vertical and horizontal rip stop technology for a daily cover that can take extreme conditions. All of our covers have seat belt webbing sewn on both sides with triple lock stitch construction providing the best built daily covers in the industry. Custom configurations of daily covers are welcome with our promise of quick turn-around times for delivery.
